

**PIMP.**

REUSE &  
RECYCLE

## WHO WE ARE

P.M.P. SPA is a company specialized in the production of plastic hangers. It was founded in **1967** by Angelo Spricigo and since then has been working on the market of **clothing accessories**, proposing a **wide range of articles**.

A fundamental part of its growth is the continuous research of details to **satisfy the customer's technical requirements**, constantly with a special eye to the aesthetic effect of the hanging garment. Some of the most important features that are taken into account in the creation of new models are the materials, the finishes, the colour and the linearity of the shapes.

All this has led us to work alongside with **the most famous Italians and international fashion brands**.

We are currently carrying out a project of **steady growth** with dedication.

Our "mission" is to become the **reference point** for companies operating in the fashion industry for the supply of hangers and their complementary accessories, in a national and international context.

# REUSE & RECYCLE

## THE PROJECT

PMP has been supporting the fashion business with its products for **50 years**.

In addition to this, we propose the **Reuse & Recycle** service dedicated to companies like yours, which are sensitive to environmental issues.

Sustainability is in fact the key concept: through the introduction of a logistic process for the **collection** of hangers from the sales points and the subsequent **sorting**, **selection** and **reconditioning** activities, we are able to avoid that a single hanger is considered waste.

This is possible thanks to our **dedicated facilities**, our **collection centers** (currently 4) on the Italian territory and investments in plants dedicated to selection and recovery. We also give the possibility of **recycling** the hangers that cannot be reused. They are then **transformed** into plastic material ready for new production.

## THE PROJECT

Our **goal** is to bring your  
company to have

**0 WASTE**

of plastic hangers

## STRENGTHS

### Respect for the environment

The primary objective of the **Reuse & Recycle** service is to minimize the impact of the hanger on the environment where we live.

In fact it is known that the hanger, if not reused, **cannot be conferred to the separate collection** of plastic but must be disposed of as dry waste.

This has an evident impact on the management of waste in your company and among other things it involves charges for disposal costs.

Through the **Reuse & Recycle** service no hangers are conferred to waste disposal anymore, because they are **reused or recycled** to produce new hangers.

Your company can use this information with the stakeholders **as a reduction in the CO<sub>2</sub> footprint.**

## STRENGTHS

### Safety

PMP has implemented, developed and integrated in recent years the **Reuse & Recycle** service with some important customers, effectively becoming the leader in the sector.

So your company can count on a **tested service**, unique in its kind in Italy, with the certainty that its logistic processes are not modified.

## STRENGTHS

### Customized solutions

Of course, we are aware of the fact that each customer has its own **logistical needs**, its processes, its information systems to be respected.

For this reason, the **Reuse & Recycle** service is developed together with you both from the logistical point of view of collection and distribution, and also from the economic point of view.

To get to the definition of an **ad-hoc project**, we go through a first phase of evaluation of the current situation of your process: volumes to be managed, variety of models / colours / sizes / customizations, distribution of sales points on the territory, and other significant parameters.

This **initial screening**, not only with help you visualize this type of management within your company, but will also allow us to present you with an **economic evaluation** of the service.

## STRENGTHS

### Saving

The **Reuse & Recycle** service can result in different economic benefits for your company depending on how it is organized.

A sure benefit is certainly the zeroing of the charges currently paid by your company for the disposal of the hangers (have you ever checked how much your annual expenditure for this management amount is?).

# How it works

## 1. COLLECTION

The process starts from the sales point: procedures for the correct separation of the used hangers will be defined (example: by model / size).

## 2. TRANSPORT

The hangers packed according to the defined procedure will be transported to our recovery centers in Italy.

## 3. SELECTION AND RECOVERY

In our centers the hangers will be selected, further divided and reconditioned.

## A. WASTE RECYCLING

Hangers that cannot be reused due to quality defects will be destroyed, and the various components (metal, paper, plastic) separated. The plastic component will be processed and regenerated, the rest of the materials transferred to external centers to be recycled.

## B. NEW PRODUCTIVE CYCLE

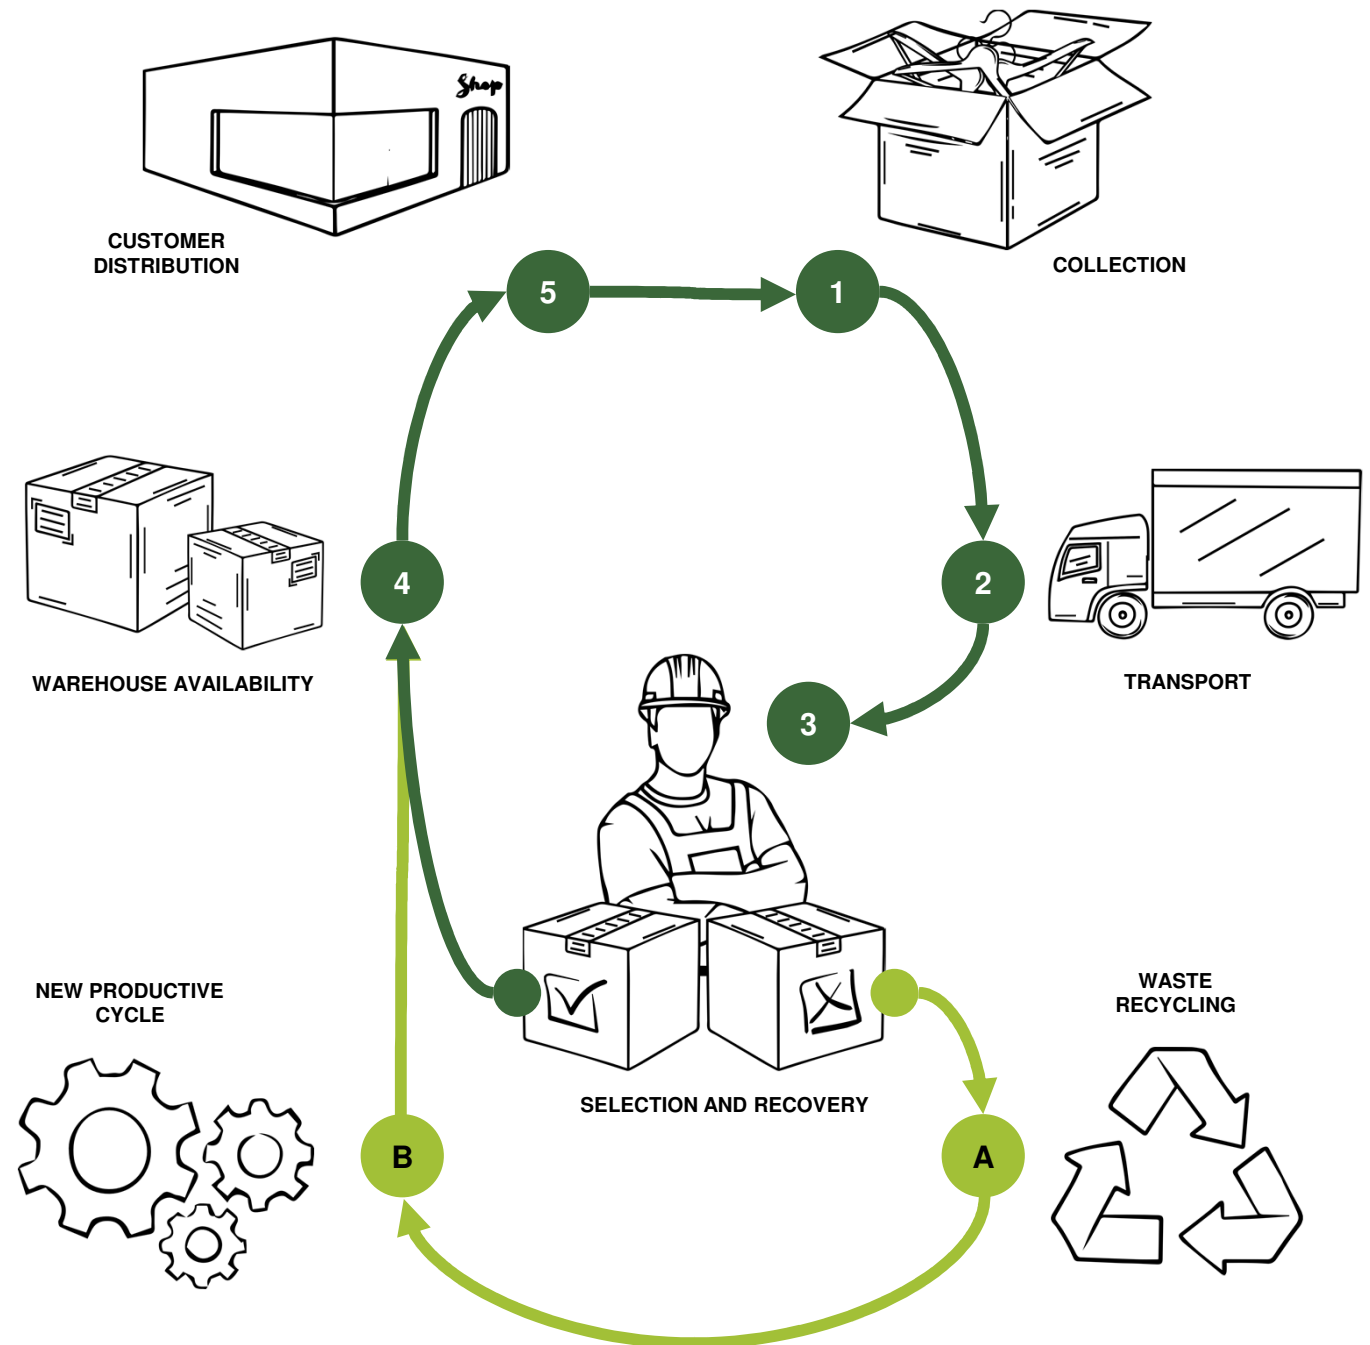

The recycled materials are used again in the production process, saving energy and raw materials.

## 4. WAREHOUSE AVAILABILITY

The hangers selected and reconditioned, and those obtained from recycled raw materials, are available at our warehouses

## 5. CUSTOMER DISTRIBUTION

Delivery to the destination requested by the customer (shops, ironing facility, laboratories ..).

## 4 Collection and recovery centers located on the national territory

## Environmental impact statement in the production of 10,000 plastic hangers

	NORMAL PRODUCTION	REUSE & RECYCLE	SAVING %
Consumed electricity (kwh)	430	5	98%
Consumed plastic(kg)	450	0	100%
Consumend CO <sub>2</sub> plastic (kg)	2.7	0	100%
Total CO <sub>2</sub> on the process (kg)	75	25	67%

- The data shown above are relative to estimated calculations of PMP spa based on their experience and refer to averages for the year 2017.
- The value of total CO<sub>2</sub> for the **Reuse & Recycle** service includes an estimate of CO<sub>2</sub> production coming from road transport of hangers from a sales point in North Italy to our center in Treviso for the considered lot.
